

Dear Patient,

Potomac Pediatrics is able to offer Rotateq. This vaccine prevents rotavirus gastroenteritis, a vomiting and diarrhea illness responsible for the dehydration that hospitalizes thousands of children each year. This vaccine is given in 3 doses, ideally

4-10 weeks apart. The first dose is given to infants between 6 and 12 weeks of age, and the last dose of rotavirus vaccine should be administered by 32 weeks of age.

Some insurance carriers are covering this vaccine; however, at this time we cannot guarantee that your particular carrier is doing so. The cost of the vaccine is \$88 /dose, or \$264 for the 3 necessary doses. We will continue to submit as always to your insurance carrier; however, if they do not cover the vaccine, you will be responsible for our fees.

Sincerely,

Potomac Pediatrics
